

1. Use pandas in Python to read the file to a data frame called boxoffice, show the first lines by using head(), output the amount for Star Wars by using iloc or loc. Once you are done, please run the following codes in different cells and observe what they are producing. Please either save the image or take a screen shot and upload it.

```
boxoffice['amount'].plot.bar()
import matplotlib.pyplot as plt
plt.figure(figsize=(15, 3))
plt.bar(boxoffice['title'],boxoffice['amount'])
```

```
import pandas as pd
```

```
boxoffice = pd.read_csv("/content/drive/MyDrive/DATA/boxoffice.csv")
boxoffice.head()
```

	rank	title	title_short	amount	amount_text
0	1	Star Wars: The Last Jedi	Star Wars	71565498	\$71
1	2	Jumanji: Welcome to the Jungle	Jumanji	36169328	\$36
2	3	Pitch Perfect 3	Pitch Perfect 3	19928525	\$19
3	4	The Greatest Showman	Greatest Showman	8805843	\$8
4	5	Ferdinand	Ferdinand	7316746	\$7

```
boxoffice.loc[0, ['amount']]
```

0

amount 71565498

dtype: object

```
boxoffice['amount'].plot.bar()
```

<Axes: >

```
import matplotlib.pyplot as plt
plt.figure(figsize=(15, 3))
plt.bar(boxoffice['title'],boxoffice['amount'])
```

<BarContainer object of 5 artists>

2. Use read.csv function in R to the file. Then, show the first lines by using head(). Finally, output the amount for Star Wars. You can either use indexes or column name.

```
> df = read.csv("C:/Users/User/OneDrive - Umich/15_CSC302 Intro to Data Visualization/Rscripts/boxoffice.csv", header=T)
> head(df)
  rank      title      title_short  amount amount_text
1    1  Star Wars: The Last Jedi    Star Wars 71565498      $71
2    2 Jumanji: Welcome to the Jungle    Jumanji 36169328      $36
3    3      Pitch Perfect 3 Pitch Perfect 3 19928525      $19
4    4    The Greatest Showman Greatest Showman 8805843       $8
5    5      Ferdinand    Ferdinand 7316746       $7

> df[df$title_short == "Star Wars", "amount"]
[1] 71565498
```
